

## Reflection

This assignment wasn't too bad, it incorporated a lot of things we know from previous classes. So, the problems weren't too hard to figure out. Some things that really confused me though is the new programming language. Every time I wanted to do something I new in C# or JavaScript I had to search up the way to do it in C++. In order I would rank the problems:

Part 1: Easy

Part 2: Easy

Part 3: Medium

Part 4: Hard

For part 4 it wasn't as much of a challenge to solve the problem, but it was hard for me not knowing how to do anything in C++, to pick a random number I had to search up how to get one within a range. I ended up using `rand ()`; but I didn't know I had to make a seed, so I got stuck on that for a while. Same thing for checking if the input was an int or not. I got stuck on part 4 about 2 hours. The rest took 10-30mins each.
